Product Related and Specific Warranties

12. Limited Glass Breakage Warranty / Seal Failure Warranty

Not all films are eligible for Glass Breakage And Seal Failure Coverage. Some types of film, when applied to certain types of glass, almost always result in glass breakage due to excessive heat absorption. To prevent unnecessary glass breakage, Avery Dennison only approves and offers its Limited Warranties on glass and film combinations as detailed on the Company's Film To Glass Application Chart, which may be changed from time to time by Avery Dennison. Tempered, heat strengthened, or annealed glass, including the inner (room side) pane of double pane or insulated glass units, is warranted by Avery Dennison against glass breakage due to thermal shock fracture only for a period of five (5) years after window film installation. In the event of glass failure due to thermal stress shock fracture that is caused only by the application of Avery Dennison window film, Avery Dennison shall only be required to provide the following warranty service: (i) Replace the broken glass; (ii) Replace or repair that portion of the window frame in immediate contact with the glass, if damaged due to the break; and (iii) Replace such quantity of Avery Dennison window film judged to be necessary by Avery Dennison; and (iv) Board up or cover openings caused by glass failure when replacement of glass is subject to unreasonable delay.
The warranty service provided by Avery Dennison shall never exceed $500 (or the equivalent amount in the relevant local currency),- per glazing unit (this includes costs for materials, labor and film). Any pre-existing condition which may affect glass breakage or seal failure of the filmed glass, will void this Limited warranty. Certain film to glass combinations in excess of 2,500 square feet on commercial buildings requires written pre-approval by Avery Dennison in order to qualify for the glass breakage and seal failure warranty. Please consult the Film to Glass Chart for further details.

Under this warranty 'seal failure' will have the following meaning: a visible break or opening of the window's air seal, resulting in an ineffective sealing of the insulated glass (IG) unit, allowing moisture and/or air to penetrate, causing an internal "fogging" between the two panes of glass. within three (3) years after the application of the Avery Dennison window film, to which the seal failure coverage applies, Avery Dennison will pay for repair or replacement of up to, but not in excess of, $500 (or the equivalent amount in the relevant local currency) per defective glass unit.

In addition to the limited warranty coverage as set out in clause 3, this warranty does not cover the following:

a) Two or more films are applied to the same glass surface (excluding film SF Clear Mod).
b) Filmed windows are triple pane construction, textured, wire film glass, or an IG unit inclusive of a suspended film.
c) Film is applied to any glass on which there is paint, lettering, signs, stickers or other permanent or temporary ornamentation.
d) The filmed glass has prior damage, is chipped, cracked, has holes in it, or if light is visible between the frame and the glass.
e) The film is applied to plastics, acrylics, polycarbonates or other non-glass substrates (excluding Avery Dennison Poly window films).
f) The glass is found to have been cracked or exhibits evidence of seal failure at the time of window film installation.
g) Frames or seals are not resilient, such as solid metal or solid wood frames, or any hard material without resilient expansion seals.
h) One glass side is more than 10 feet or the glass has more than 100 sq. ft. of surface area.
i) The breakage was due in whole or in part to forces not involving thermal stress such as severe winds, earthquakes, civil disturbance, explosions, etc.
j) Double pane glass with more than 40 sq. ft. surface area.
k) Clear annealed glass thicker than 3/8 inch.
l) Tinted annealed glass thicker than ¼ inch.
m) Glass window blocks.
n) Partial applications of film to glass.
o) Architectural shading from exterior overhangs, extensions, columns, pillars, etc.
p) Non-rectangular windows larger than 20 sq. ft.
q) Buildings with more than 1% previous glass breakage over the last two (2) years prior to film installation.
r) Latent glass defects such as, but not limited solely to, Nickel Sulfide inclusion.
s) The window film is applied to any type of laminated glass without the prior written consent of Avery Dennison (unless approved on FTG).

13. Security Film Caution

a) Many factors can contribute to potential damages arising from wind, impact, bomb blast, or break and entry incidents including the window film solution selected, type and thickness of glass, building construction, exterior pressure, proximity of impact occurrence, quality of window or door frames, intruder size and strength, and type of tools used to gain entry. While the Avery Dennison Security Films may help reduce the occurrence of flying glass shards under certain conditions and potentially delay intruders, these films do not prevent death, personal injury or property damage due to these incidents. Window films are not bulletproof and are not designed to stop intruders. Customers should consult with security professionals prior to selecting any window films to determine suitability for the intended application and environment.
b) This product is not approved in the State of Florida for use as hurricane, windstorm or impact protection from wind-borne debris from a hurricane or windstorm. In compliance with Florida Statute 553.842, this product may not be advertised, sold, offered, provided, distributed or marketed in the State of Florida as hurricane, windstorm or impact protection from wind-borne debris from a hurricane or windstorm.
